

Designing your internship front-end template

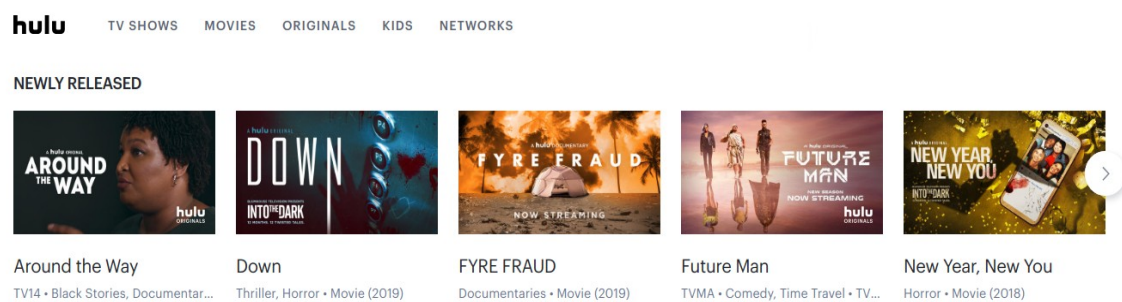

This internship will help you understand functioning of a basic HTML document and CSS styling. Before you start with this tutorial, we strongly recommend you to visit following websites.

(Internet connection is strongly recommended while designing this template for beginners)

The following links are extracted from the most popular full stack curriculum supported by a passionate open source community.

- <https://www.theodinproject.com/courses/web-development-101/lessons/introduction-to-the-front-end>
- <https://www.theodinproject.com/courses/web-development-101/lessons/html-and-css-basics>

The following internship project uses popular entertainment websites like netflix /hotstar /hulu as a sample layout reference template.

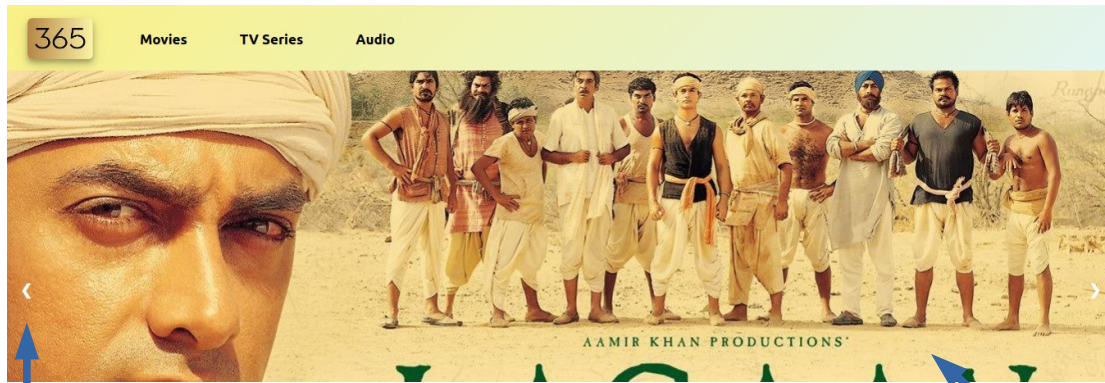

The following descriptions below will give you a brief introduction about different sections of this web-page and how to design.

Website logo with box shadow and border radius css properties.

Header with navigation links

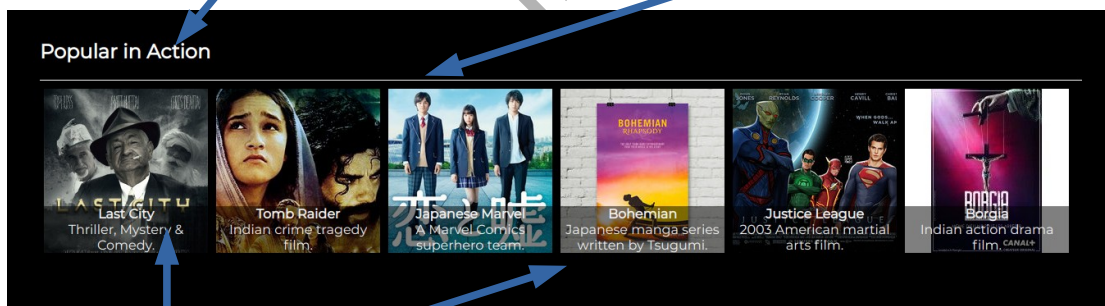

Div Media carousal container NEXT button implement javascript onclick event.

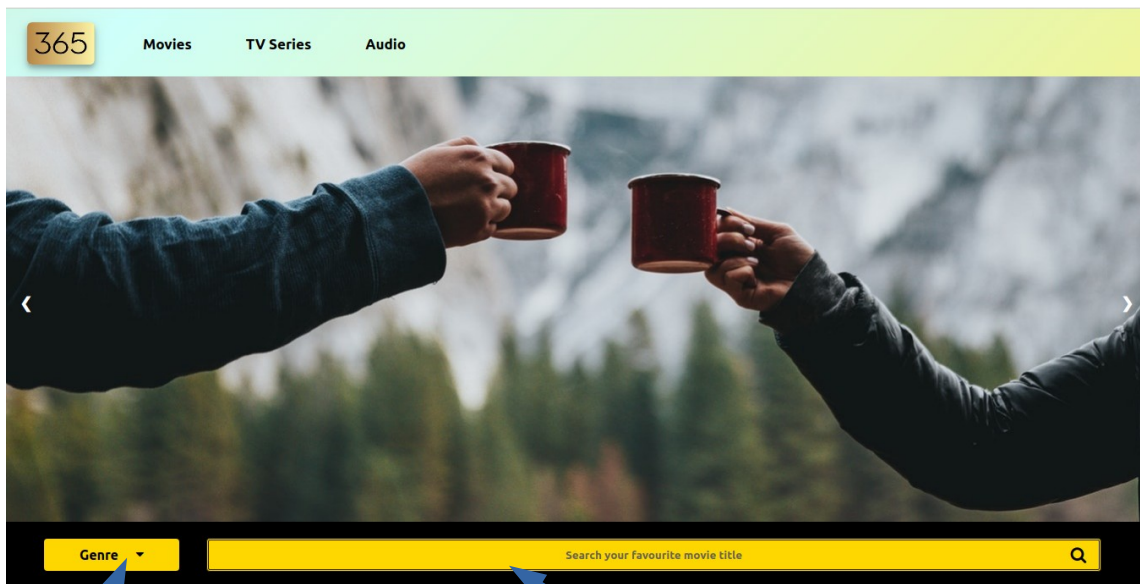

Media carousal container div containing Images to be displayed.

Genre category

This is a Border-bottom css property and not <hr> tag

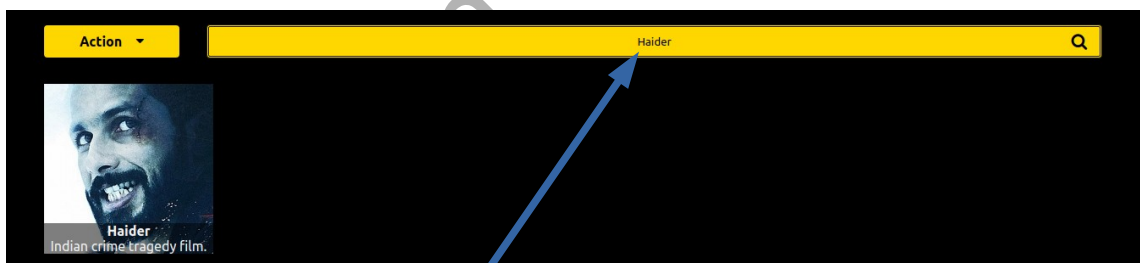

Sub div elements containing movie poster images and movie description as shown above.

Select tag element for Genre selection(All, Action, Drama, Sci-Fi). On select a particular option movies list gets filtered.

Search text-box on entering required movie name filters data or outputs "no result found". There's a dummy search button and css font properties, border properties and background color have been applied.

On typing movie name for here e.g. "Haider", the movie is filtered from movies list and displayed.

Footer contains site logo and copyright info. If required, other site-navigation links can also be merged.
